MORGAN BRIGGS

BUSINESS SYSTEMS | HEALTHCARE IT | SOFTWARE DEVELOPMENT | ANALYTICS

Mount Vernon, WA | (916) 793-6597 | Bmorgan8906@gmail.com linkedin.com/in/morgan-briggs-b43a10334 | morgan238-ctrl.github.io/morgan-briggs-portfolio/

PROFESSIONAL SUMMARY

Business systems and software professional with five years of production healthcare software development and current finance and operations systems ownership. Personally authored the OMS working core before ChatGPT; now directs human-governed AI modernization toward an installable software product, combining original programming, architecture, requirements, testing, and business judgment.

TECHNICAL AND BUSINESS SKILLS

Development and integration: C#, ASP.NET, Delphi, VBA, PowerShell, HTTP/API requests and response processing, XML, HTML/CSS, Salesforce customer accounts and permissions, Visual Studio, TFS, Git/GitHub. Additional exposure: basic JavaScript, Python coursework and review of generated Python code; academic Java coursework.

Data and systems: SQL, SQL Server, MySQL, SQLite, Access, relational schemas, stored procedures, validation, reconciliation, imports, authentication and authorization, Microsoft Entra ID, Windows Server/IIS, application support.

Analysis and delivery: Requirements, workflow design, KPI governance, Excel, QuickBooks, ADP, Microsoft Office, SharePoint, cost modeling, cash-flow forecasting, SDLC, iterative development, Agile/Scrum experience, manual and scripted testing, documentation, training, AI workstream delegation, dependencies, acceptance and release planning.

PROFESSIONAL EXPERIENCE

Rainier Rapid LLC | Finance Manager | December 2025 - Present | Washington

- Personally authored the original working core of my Operations Management System (OMS) before ChatGPT, including business logic, calculations, automation, and the database foundation. I own the software; Rainier Rapid LLC is a client.
- Direct two AI-assisted coding workstreams with integration, independent testing, documentation, project operations, and OMS Development Coordinator support. Define acceptance criteria, manage dependencies, direct defect correction, and retain acceptance and release authority.
- Initially used ChatGPT to build a dashboard interface around existing code, calculations, and database. Existing tools support daily operations; a finished installable product remains a development goal.
- Develop a local dashboard with SQLite working records, read-only Access refresh, JSON inputs, HTML display data, and staged imports with validation, correction, revalidation, and commit. Installable deployment, OMS role-based permissions, and multi-user synchronization remain in development or planning.
- Designed Access relational schemas, keys, indexes, and SQL queries for operational records; build Excel/VBA and PowerShell automation. Implemented Slack integration to send and receive messages, access files, and process chats for labor-placement workflows.
- Standardized KPI definitions and reporting across six managers. Estimated weekly preparation fell from 48+ to about 6 hours (at least 87.5%); personal effort fell from about 20 to 2 hours (90%). Personal effort is included in the total; estimates are not time-study measurements.
- Built an Excel VBA dispatch roster and vehicle-assignment tool, then reengineered it in Access to resolve workbook overwrite and usability issues. Reduced initial preparation from 60-90 minutes to under 3 minutes; dispatchers verify and adjust final assignments.
- Built a rolling 13-week cash-flow forecast and fully burdened driver-cost model for staffing, forecasting, and route profitability. Develop forward-looking overtime analysis; distinguish modeled costs from verified savings.

MORGAN BRIGGS

PROFESSIONAL EXPERIENCE CONTINUED

Rainier Rapid LLC | Finance Manager | Continued

- Manage QuickBooks accounting, reconciliations, journal entries, expense classification, period-end close, financial statements, and analyses for ownership. Review and approve ADP timecards within recently assumed responsibilities.
- Document workflows, KPI definitions, and user instructions; train managers, gather feedback, investigate discrepancies, and refine operational tools. Preserve source records and calculation lineage; public demonstrations use fictional data.

Health Financial Systems | Software Developer | February 2010 - February 2015 | Elk Grove, CA

- One of two HCRIS developers under the lead programmer on production healthcare financial software. Built C#/ASP.NET backend functionality, customer searches, historical retrieval, report generation and downloads; maintained Delphi desktop features and customer enhancements.
- Optimized SQL queries and databases, increasing reports available for immediate download by approximately 50% and reducing reliance on delayed email delivery.
- Jointly defined Excel/API integration requirements with CEO Becky Dolin using customer feedback she conveyed. Implemented and iteratively refined the solution with her until it met the identified needs.
- Integrated Excel VBA with Delphi components through a DLL for bidirectional data exchange, proprietary calculations, and validation blocking invalid imports without opening the desktop interface. Implemented selected Medicare calculations from supplied specifications and checked expected results and sample reports.
- Personally coded HTTP/API requests, response handling, XML import/export, and data processing. Implemented database-backed authentication and subscription/facility-based authorization; separately developed Salesforce customer account and permission functionality.
- Built reusable scheduled and manual imports for tens of thousands of healthcare reports using SQL, C#, VBA, and Delphi, with validation, logs, error reports, and automatic failure notifications. Resolved duplicates, missing fields, inconsistent formats, and import failures.
- Developed SQL Server/MySQL schemas, queries, and stored procedures; supported backups, restores, validation, and production troubleshooting. Configured Windows Server/IIS and deployed websites; participated in the first physical Windows Server deployment.
- Developed compatibility logic across browser, operating-system, and Excel versions; configured virtual machines and tested environments. Used scripts, manual scenarios, and sample files before lead-programmer review; Visual Studio/TFS for source control, Asana for assigned work, and Salesforce for defects.

ADDITIONAL EXPERIENCE

Visiting Angels | Home Care Aide, Part Time | 2022 - Present

Provide individualized in-home care and communicate with clients, families, and care teams. Washington State Home Care Aide credential.

Northwest Grown Products LLC | Head Grower | Approximately 2019 - August 2022

Supervised approximately five employees; managed staffing, production schedules, inventory, environmental conditions, operating procedures, quality control, and process improvements with ownership.

EDUCATION

Skagit Valley College - Associate of Science in Data Analysis and Management (in progress). California State University, Sacramento - Computer Science coursework. 90+ college credits toward a bachelor's degree; degree not awarded.
