PROFESSIONAL SUMMARY

Business systems and analytics professional combining financial management with production software development in healthcare. Standardized six managers' reporting; estimated personal preparation fell 90%, from about 20 to 2 hours weekly. Builds database applications, dashboards, automation, and labor-cost models connecting operational data with management decisions. Brings C#/ASP.NET, SQL, Excel/VBA, and PowerShell experience.

TECHNICAL AND BUSINESS SKILLS

Data and reporting: SQL, Microsoft Access, SQLite, SQL Server, MySQL, Excel, VBA, dashboards, KPI definitions, data validation, reconciliation, workforce analysis.

Development and systems: C#, ASP.NET, PowerShell, Delphi, REST APIs, HTTP requests and response processing, XML, Salesforce customization, authentication, role-based access control, Windows Server, Visual Studio, Team Foundation Server, Git/GitHub.

Business analysis: Requirements definition, workflow design, stakeholder collaboration, process automation, financial reporting, fully burdened labor-cost analysis, cash flow forecasting, QuickBooks.

PROFESSIONAL EXPERIENCE

Rainier Rapid LLC | Finance Manager

December 2025 - Present | Washington

- Designed and implemented centralized Excel reporting, standardized KPI definitions across six managers, and eliminated fragmented spreadsheets producing contradictory reports; built a common KPI engine for consistent operational and financial analytics.
- Estimated weekly reporting effort: 48+ to about 6 hours across six managers (at least 87.5% less); personal effort: about 20 to 2 hours (90% less). Based on approximate recurring preparation time before and after standardization, not time-study measurements.
- Designed Access relational schemas, keys, indexes, and SQL queries for operational records; built Excel/VBA and PowerShell automation, including Slack messaging, to support imports, rosters, assignments, and management reporting.
- Reduced initial daily dispatch roster preparation from 60-90 minutes to under 3 minutes; rebuilt the Excel VBA workflow in Access to resolve recurring workbook overwrite problems.
- Own requirements, operational data collection, KPI development, and executive reporting; collaborate with ownership, operations, HR, and dispatch to validate business rules and reporting outputs.

SELECTED PROJECT

Rainier Operations Management System | Operations and Financial Analytics

Project developed within the Finance Manager role at Rainier Rapid LLC.

- Develop a local dashboard with SQLite as the primary working database for payroll, attendance, roster records, and history. Preserve Access as a read-only source through Raw Access refresh; use JSON inputs and generated HTML display data. Normal use does not require a live Access connection.
- Designed a fully burdened driver-cost model incorporating wages, overtime, bonuses, standby, paid time off, insurance, payroll taxes, fleet losses, and operating expenses to support staffing, forecasting, and route profitability analysis.
- Redesigned dashboard imports around staging, validation, user correction, automatic revalidation, and commit. Use AI to accelerate prototyping and implementation; personally review code, debug where able, define requirements, test real operational scenarios, identify defects, direct corrections, and accept features against business needs.
- Built a rolling 13-week cash flow forecast integrating revenue, payroll, fleet costs, vendor obligations, and cash balances to support ownership decisions.

PROFESSIONAL EXPERIENCE CONTINUED

Health Financial Systems | Software Developer

Approx. 2010/2011 - February 2015 | Elk Grove, CA

- One of two HCRIS developers under the lead programmer; built C#/ASP.NET backend reporting, historical searches/downloads and selected Medicare calculations from specifications, validated against expected results/sample reports.
- Optimized SQL queries and databases, increasing the number of reports available for immediate download by approximately 50%.
- Built database-backed authentication and subscription/facility-based authorization; developed Salesforce customer permissions functionality.
- Developed Delphi desktop features and customer enhancements; fixed defects. Integrated Excel VBA with Delphi via DLL for bidirectional data exchange, calculations and validation blocking invalid imports without opening the desktop UI. Partnered with CEO Becky Dolin to jointly define requirements from customer feedback she conveyed; implemented and iteratively refined the Excel/API integration with her until it met customer needs.
- Built large-scale scheduled and manual imports using C#, SQL, Delphi and VBA, with validation, logging and failure notifications.
- Developed SQL Server/MySQL schemas, queries and stored procedures; optimized databases, supported backups/restores and data validation, configured Windows Server/IIS and deployed websites. Used Visual Studio/TFS, personal testing and lead-programmer review.

ADDITIONAL EXPERIENCE

Visiting Angels | Home Care Aide, Part Time | 2022 - Present
Client care, documentation, and communication with families and care teams.

Northwest Grown Products LLC | Head Grower | Approximately 2019 - August 2022
Production planning, staff coordination, operating procedures, and quality control.

EDUCATION

Skagit Valley College | Associate of Science in Data Analysis and Management
In progress

California State University, Sacramento | Computer Science coursework
90+ college credits completed toward a bachelor's degree; degree not awarded.
